Analogue output: RCA stereo

Digital output: optical S/PDIF (Toslink)

Outboard power supply: 5V/1000mA DC; 100 - 240V, 50/60Hz

Power consumption: 200mA DC

Pro-Ject Audio System's new streaming generation

The Stream Box E continues our **new streaming generation** powered by the **market-leading Wiim OS™**, delivering fast operation, stable connectivity, and an intuitive user experience. Control is effortless with the new **Pro-Ject Home** app, which provides seamless access to settings, playback, and multi-room management.

Setting up the WiFi connection is a breeze. Just open the app and it **automatically detects your new Stream Box E** and walks you through the **setup process**. Comfortably **reset the WiFi** connection via **long press of the play/pause button** on the front panel.

Versatile Streamer & Preamp

The Stream Box E is a **versatile device** that can be used in many different setups.

Used as a **classic network streamer** it adds WiFi connectivity to your existing **integrated amplifier**. Paired with a **standalone power amplifier and passive speakers** it creates a modern audio system supporting both digital streaming and analogue sources. Or connected directly to your favorite **active speakers** it allows to create clean, minimalist hifi stereo setups.

The **tactile aluminium volume and play/pause buttons** allow for **quick music controls**, whenever you don't have your phone for app-control nearby.

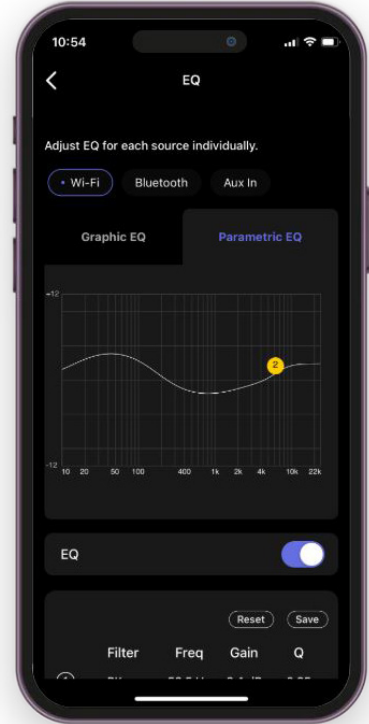

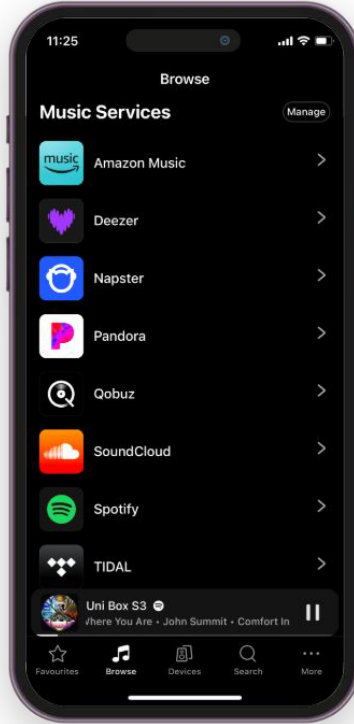

Built for **performance and longevity**, the Stream Box E features a **robust aluminium and metal enclosure** that **protects** sensitive internal components while providing **effective electromagnetic shielding**. This allows the Stream Box E to be placed **directly next to**, or even stacked **on top of**, your amplifier **without compromising audio performance**.

Option 1: Connected to Integrated amplifier

The most traditional use case, the Stream Box E will add **digital streaming capabilities** to your trusted **integrated amplifier**. This **seperates streaming** from your amplifier,

resulting in **best audio quality** and **longevity** for your system. There is no need to replace your amplifier, when you can **add new features** to it, as time goes by.

Stream Everything

Spotify, Tidal, Amazon Music, Qobuz, Napster, Pandora, Tuneln, Deezer, and many more.

Customize Your Sound

Stream music up to 24-bit & 192 kHz from streaming platforms or your own library. Personalize your sound experience with the included EQ functions.

Option 2: Connected to Power Amp & Passive Speakers

In this case, the Stream Box E is used as **preamp** and connected to a power amp, for example our Amp Box S3. The Stream Box E **controls the volume** and offers **digital streaming and an additional analogue input** for your favourite turntable or CD player.

Option 3: Connected to Active Speakers

The most compact setup. Connect your Stream Box E directly to your favourite **active speakers** and upgrade them with **modern WiFi streaming services** and an **extra analogue input** for your turntable. As most active speakers provide volume control as well, volume can be controlled either by the Stream Box E or by your active speakers' built in volume control.

Pro-Ject True Wireless Multi-Room Streaming

Multi-room functionality allows you to use multiple streaming devices across different rooms and control them from our Pro-Ject Home app. You can play the same music throughout your home for a synchronized listening experience, or stream different audio in each room independently. This creates a flexible, whole-home audio system that adapts to your listening preferences.

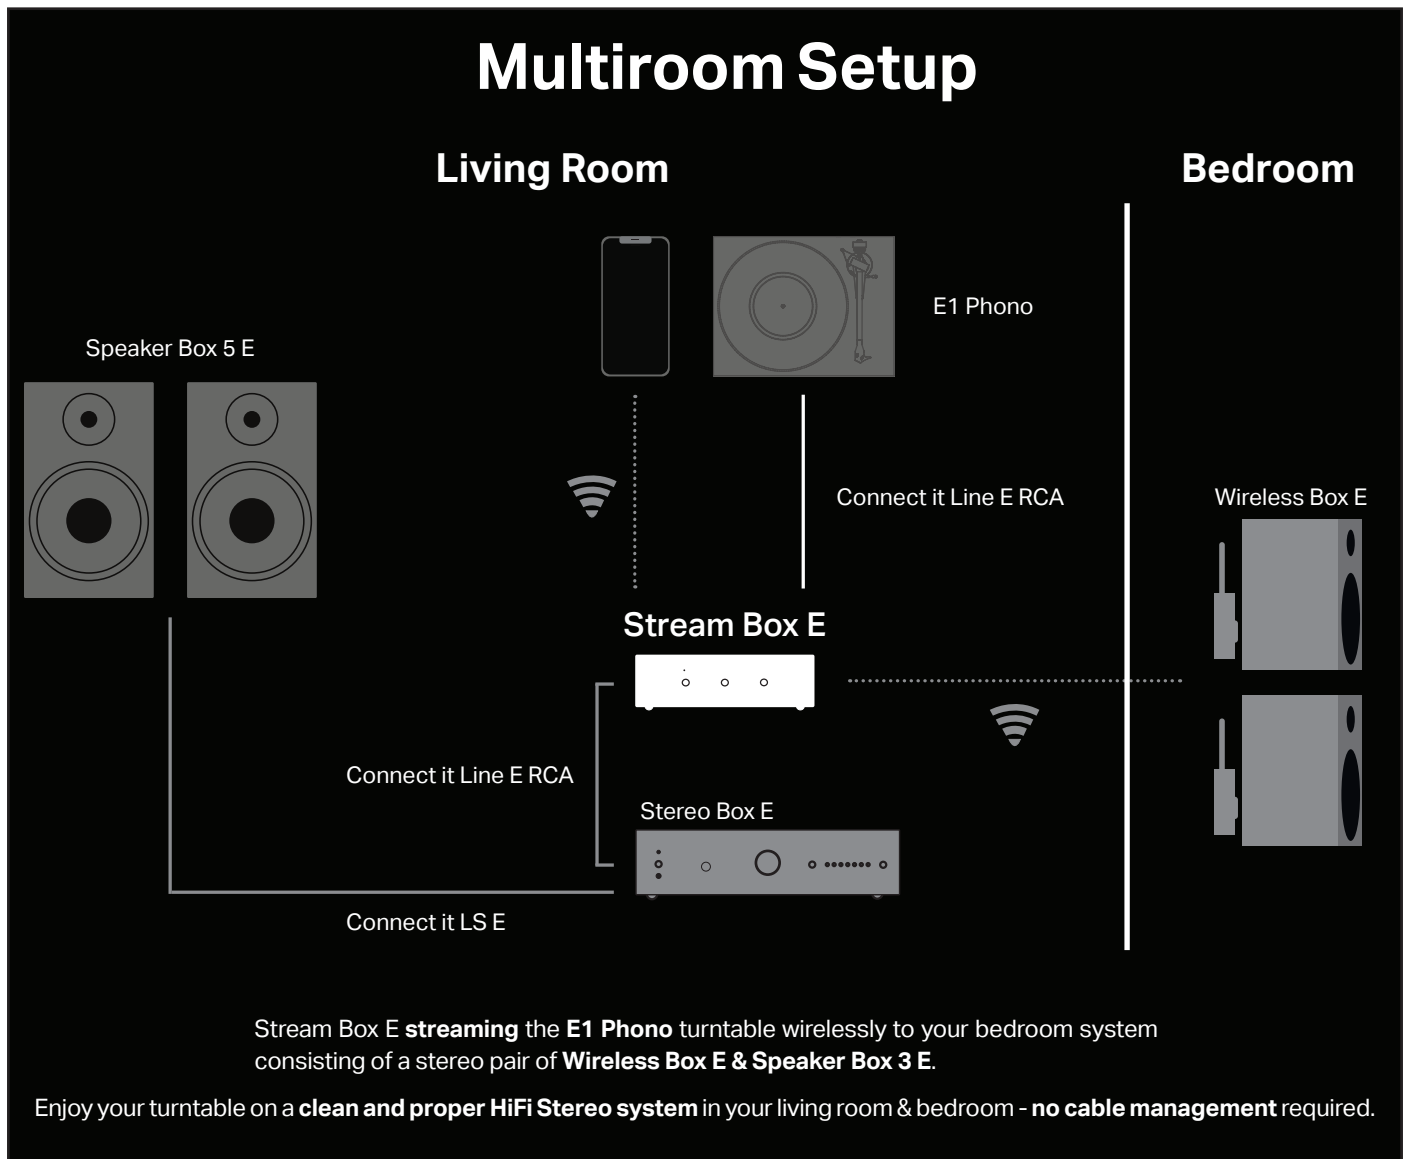

Seamless Wireless Integration

Designed for modern listening environments, the Stream Box E offers **powerful multi-room capabilities**, allowing music to **flow throughout your home**.

With **Pro-Ject True Wireless** technology, the device can **both send and receive audio wirelessly**. The integrated

analogue RCA input allows you to **connect a turntable** and **share your vinyl playback wirelessly** with other compatible devices like the **Wireless Box E** or **Uni Box S3**.

You can **group** multiple **latest generation Pro-Ject streamers***, build flexible **multi-room** systems and listen to your favourite vinyl records anywhere.

* Currently compatible with Stream Box E, Uni Box S3, Wireless Box E & WiiM devices.

Streaming Services

Pro-Ject Home gives you access to all the **major and many smaller streaming services**. The Stream Box E delivers stable, high-quality audio streaming across a wide variety of platforms, including Spotify, Tidal, Qobuz, Amazon Music, and many more, giving you seamless access to your favorite music with exceptional clarity and reliability. You can **group** multiple **latest generation Pro-Ject streamers** and build flexible **multi-room** systems*.

Performance and Connectivity

Dual-band Wi-Fi connectivity (802.11 a/b/g/n/ac) ensures reliable performance on both 2.4 GHz and 5 GHz networks, supporting **stable streaming** even in demanding network environments. **Bluetooth 5.0** is supported as well. For **analogue connectivity** the Stream Box E features a high-quality gold plated **RCA output and input**. With the latter being able to **share the connected analogue device**, like your turntable, to your **multi-room Pro-Ject network**. This is cross-compatible with other WiiM products.

Fully multi-room capable, the Stream Box E can be paired with **Uni Box S3, Wireless Box E**, and other next-generation Pro-Ject streamers for playback throughout multiple rooms. An **optical output** allows easy integration with **external DACs** or audio systems.

The Stream Box E features a **high-quality aluminium front panel** complete with **aluminium buttons**, available in silver or black. Play/pause and volume buttons give you quick access to playback controls. The **robust metal chassis** ensures **durability and a premium look**.

* Currently compatible with Stream Box E, Uni Box S3, Wireless Box E & WiiM devices.
