

Special nose protection technology protects the needle & offers easier alignment

Hyper Conical Stylus

# Pick it MM 1

## Your Vintage Collection, Reborn

MSRP 79 € (incl. VAT)

**Replacement stylus:** MSRP 59 € (incl. VAT)

- **NEW** Pick it MM cartridge series
- Low Mass Moving Magnet System
- ABS body with high damping capabilities
- Exceptionally low coloration & noise during playback
- Perfect for vintage and heritage vinyl
- Equipped with a hyper conical diamond stylus
- Aluminium alloy tube cantilever
- 1/2 inch mounting standard
- Special design protects the stylus

**Cartridge principle:** MM (Moving-Magnet)

**Channel separation at 1 kHz:** >24dB

**Output voltage at 1 kHz:** 2,2 mV (3,54 cm/sec)

**Tracking ability at 315Hz:** 70 µm

**Dynamic compliance:** 14 µm/mN

**Frequency response:** 10 - 30 000 Hz +/- 2dB

**Stylus type:** Hyper Conical (aluminium tube cantilever)

**Tracking force, range:** 1,6 - 2,0 g (mN)

**Tracking force, recommended:** 1,8 g (mN)

**Tracking angle:** 23°

**Recommended load resistance:** 47 kΩ

**Cartridge weight:** 5,5 g

## Natural, Musical Sound

The Pick it MM1 has a warm, musical character with a subtle presence lift in the upper frequencies, which is typical of moving magnet designs. It brings out detail and air in the highs without sounding harsh. The hyper conical stylus is very forgiving of worn or imperfect grooves and plays down clicks and crackle instead of highlighting them. Well-loved and vintage records come across with less surface noise and more of their original character. That makes the MM1 a forgiving, affordable choice, especially for heritage collections and second-hand finds.

## Integrated Stylus Protection

The stylus is the most delicate part of any cartridge. A careless moment while mounting, cleaning or cueing a record can bend the cantilever or damage the diamond. The cartridge has a protective nose built into the front of the stylus housing. It reaches forward over the cantilever, so the diamond sits sheltered underneath and an accidental knock from the front hits the housing, not the stylus. There's no separate guard to lose or forget, because the protection is always in place.
